About the Sustainable Development Goals

Our planet is a beautiful place. We can easily forget how much it has to offer because we are constantly being reminded of the challenges we face daily, from inequalities to poverty to climate change. If nothing changes to stop, prevent or reverse these challenges, it will only get worse. That is why the United Nations exists.

Everything we stand for is to create a brighter future for every individual, where everyone can thrive and reach their potential. We want to preserve the good that exists in people, places and the planet and put an end to issues that takes hope away from us. That is why world leaders came together in 2015 and mobilised the 2030 Agenda: a set of 17 goals for sustainable development.

This matters to each of us because we are all responsible for being a part of the change. Our actions today affect our children tomorrow. Everyone deserves a fair and equal chance in life. Through the goals, we can reach far and wide because the goals are universal, they leave no one behind. It's also important to understand that these goals are interconnected. We cannot separate poverty from hunger, or education from women's empowerment and so on. If we can grasp that, we are closer to understanding the needs that must be met, and in turn we are closer to achieving the 17 goals. It's time to give back to the planet what the planet has given to us. It's simple and there is no cost.

Discover some of the simple actions you can take to stay on the road to a prosperous planet.

The Sustainable Development Goals are humanity's to-do list for a sustainable planet, a clear roadmap for a better future.

This content has been taken from United Nations website of SDG for purpose to education and imparting knowledge of SDG.

Goal No 1: NO POVERTY: WHY IT MATTERS

55 per cent of the world's population have no access to social protection

What's the goal here?

To end poverty in all its forms everywhere by 2030.

Why?

More than 700 million people, or 10% of the world population, still live in extreme poverty and is struggling to fulfil the most basic needs like health, education, and access to water and sanitation, to name a few. The majority of people living on less than \$1.90 a day live in sub-Saharan Africa.

Worldwide, the poverty rate in rural areas is 17.2 per cent—more than three times higher than in urban areas.

Having a job does not guarantee a decent living. In fact, 8 per cent of employed workers and their families worldwide lived in extreme poverty in 2018.

Poverty affects children disproportionately. One out of five children live in extreme poverty. Ensuring social protection for all children and other vulnerable groups is critical to reduce poverty.

Why is there so much poverty in the world?

Poverty has many dimensions, but its causes include unemployment, social exclusion, and high vulnerability of certain populations to disasters, diseases and other phenomena which prevent them from being productive. I'm not poor. Why should I care about other people's economic situation?

There are many reasons, but in short, because as human beings, our well-being is linked to each other. Growing inequality is detrimental to economic growth and undermines social cohesion, increasing political and social tensions and, in some circumstances, driving instability and conflicts. Can we actually achieve this goal?

Yes. To end extreme poverty worldwide in 20 years, economist Jeffrey Sachs calculated that the total cost per year would be about \$175 billion. This represents less than one percent of the combined income of the richest countries in the world.

So what can I do about it?

Your active engagement in policymaking can make a difference in addressing poverty. It ensures that your rights are promoted and that your voice is heard, that inter-generational knowledge is shared, and that innovation and critical thinking are encouraged at all ages to support transformational change in people's lives and communities.

Governments can help create an enabling environment to generate productive employment and job opportunities for the poor and the marginalized. They can formulate strategies and fiscal policies that stimulate pro-poor growth, and reduce poverty.

The private sector, as an engine of economic growth, has a major role to play in determining whether the growth it creates is inclusive and hence contributes to poverty reduction. It can promote economic opportunities for the poor, focusing on segments of the economy where most of the poor are active, namely on micro and small enterprises and those operating in the informal sector.

The academic and education community have a major role in increasing the awareness about the impact of poverty. Science provides the foundation for new and sustainable approaches, solutions and technologies to tackle the challenges of reducing poverty and achieving sustainable development. The contribution of science to end poverty has been significant. For example, it has enabled access to safe drinking water, reduced deaths caused by water-borne diseases, and improved hygiene to reduce health risks related to unsafe drinking water and lack of sanitation.

Daily Action Points:

1. Get everyone involved. Have a classroom do regular outreach day trips to areas in need.
2. At birthday parties offer the option to donate money to your chosen charity in replacement of a birthday gift
3. Buy fair-trade products to support the sustainable trade system, meaning employees are rewarded fairly for their work.
4. Teach a skill or short course at a community centre (computer skills, building a resume, preparing for job interviews)
5. Buy clothing or other products from stores that donate a portion of their money to charities.
6. Sponsor a child so they can have access to food, education, and health.
7. Clean out your pantry. Fill a box with non-perishable foods and donate it to a food bank.
8. Generate discussion around poverty. Write a blog, or write an article in a local newspaper.
9. Volunteer in homeless shelters. Your time can be more valuable than money.
10. If possible, give to every beggar on the street. An apple, a bottle of water, small change or even just a smile are better than not giving at all.

Goal No 2: ZERO HUNGER: WHY IT MATTERS

A profound change of the global food and agriculture system is needed to nourish today's 800 million hungry, plus the additional 2 billion increase in global population expected by 2050

What's the goal here?

To end hunger, achieve food security and improved nutrition and promote sustainable agriculture.

Why?

Extreme hunger and malnutrition remains a barrier to sustainable development and creates a trap from which people cannot easily escape. Hunger and malnutrition mean less productive individuals, who are more prone to disease and thus often unable to earn more and improve their livelihoods.

There are more than 800 million people who suffer from hunger worldwide, the vast majority in developing countries.

How many people go hungry?

The number of people going hungry has increased since 2014. An estimated 821 million people were undernourished in 2017.

The prevalence of undernourishment has remained virtually unchanged in the past three years at a level slightly below 11 per cent.

This reversal in progress sends a clear warning that more must be done and urgently if the Sustainable Development Goal of Zero Hunger is to be achieved by 2030. Why are there so many hungry people?

Climate-induced shocks, civil insecurity and declining food production have all contributed to food scarcity and high food prices.

Investment in the agriculture sector is critical for reducing hunger and poverty, improving food security, creating employment and building resilience to disasters and shocks.

Why should I care?

We all want our families to have enough food to eat what is safe and nutritious. A world with zero hunger can positively impact our economies, health, education, equality and social development.

It's a key piece of building a better future for everyone. Additionally, with hunger limiting human development, we will not be able to achieve the other sustainable development goals such as education, health⁹ and gender equality. How much will it cost to achieve zero hunger?

We will need an estimated additional \$267 billion per year on average to end world hunger by 2030. There will need to be investments in rural and urban areas and in social protection, so poor people have access to food and can improve their livelihoods.

What can we do to help?

You can make changes in your own life—at home, at work and in the community—by supporting local farmers or markets and making sustainable food choices, supporting good nutrition for all, and fighting food waste.

You can also use your power as a consumer and voter, demanding businesses and governments make the choices and changes that will make Zero Hunger a reality. Join the conversation, whether on social media platforms or in your local communities.

Action Points:

1. Spread the word. The more ideas are spread to combat hunger; the more people act.
2. Donate non-perishable foods to charities.
3. Support food assistance programs. They provide over 20 times more food than food banks, food pantries and soup kitchens.
4. Provide food for schools in developing countries. When there is lunch available, attendance increases, which also means more girls marry later and have smaller families.
5. If you employ workers on minimum wage, help support their other needs like education for their children, or housing supplies.
6. Many emergency food providers need specialized skills such as accounting, social media or writing skills. Volunteer your expertise once a week.
7. Keep a bag of apples or tinned foods in the car for street beggars.
8. Many hungry people hesitate to ask for help because of the stigma and shame of it. Speak up about misconceptions and educate others about the realities of hungry persons.
9. Read a book on hunger. A greater understanding of its causes will better prepare you to make a difference.
10. Support local farmers by buying your food at farmer's markets.

Goal No 3: GOOD HEALTH AND WELL-BEING: WHY IT MATTERS

Spending \$1 billion in immunization coverage can save 1 million children's lives each year.

What's the goal here?

To ensure healthy lives and promote well-being for all at all ages.

Why?

Ensuring healthy lives and promoting wellbeing for all at all ages is important to building prosperous societies.

Major progress has been made in improving the health of millions of people. Maternal and child mortality rates have been reduced, life expectancy continues to increase globally, and the fight against some infectious diseases has made steady progress.

However, in the case of other diseases such as malaria and tuberculosis, progress has slowed or stalled.

At least half the world's population are still without access to essential health services.

In rich and poor countries alike, a health emergency can push people into bankruptcy or poverty.

Concerted efforts are required to achieve universal health coverage and sustainable financing for health; address the growing burden of non-communicable diseases, tackle antimicrobial resistance and environmental factors contributing to ill health.

What progress have we made so far?

Major progress has been made in several areas, including in child and maternal health as well as in addressing HIV/AIDS.

Despite this progress, maternal mortality continues to affect women in low- and middle-income countries disproportionately.

The total number of deaths of children under 5 years of age dropped from 9.8 million in 2000 to 5.4 million in 2017. Half of those deaths occurred in sub-Saharan Africa, and another 30 per cent in Southern Asia. Yet stark disparities persist across regions and countries.

How much will it cost to achieve these targets?

Ensuring healthy lives for all requires a strong commitment, but the benefits outweigh the cost. Healthy people are the foundation for healthy economies.

For example, if we spent \$1 billion in expanding immunization coverage against influenza, pneumonia and other preventable diseases, we could save 1 million children's

lives each year. In the past decade, improvements in health and health care led to a 24 per cent increase in income growth in some of the poorest countries.

The cost of inaction is greater—millions of children will continue to die from preventable diseases, women will die in pregnancy and childbirth, and health care costs will continue to plunge millions of people into poverty.

Non-communicable diseases alone will cost low- and middle-income countries more than \$7 trillion in the next 15 years.

What can I do to help?

You can start by promoting and protecting your own health and the health of those around you, by making well-informed choices, practicing safe sex and vaccinating your children.

You can raise awareness in your community about the importance of good health, healthy lifestyles as well as people's right to quality health care services, especially for the most vulnerable such as women and children.

You can also hold your government, local leaders and other decision makers accountable to their commitments to improve people's access to health and health care.

Action Points:

1. Don't smoke.
2. Be more active. Go for walks at lunchtime or cycle to work.
3. Eat a healthy diet and drink a lot of water.
4. Be part of increasing awareness of, and support for, mental health ailments such as depression, substance abuse or Alzheimer's
5. Heart disease remains the number 1 killer. Educate yourself on the causes and symptoms of heart disease as well as other Non-Communicable Diseases.
6. HIV/AIDS is not over. Protect yourself. Test yourself.
7. Never stop learning. Engaging in work or educational activities helps lift older people out of depression. So, learn a new language, read a lot, set up a book club.
8. Breastfeed. It is natural and the best source of nourishment for babies. Breastfeeding protects infants from illnesses, has a long term benefit for children and it benefits mothers.
9. Get enough sleep.
10. Make time for yourself and your friends.

Goal No 4: QUALITY EDUCATION: WHY IT MATTERS

262 million children and adolescents remain out of school. 617 million lack minimum proficiency in reading and mathematics.

What is the goal here?

Ensure inclusive and quality education for all and promote lifelong learning. Why does education matter?

Education enables upward socioeconomic mobility and is a key to escaping poverty. Education is also essential to achieving many other Sustainable Development Goals (SDGs).

When people are able to get quality education they can break from the cycle of poverty. Education helps to reduce inequalities and to reach gender equality. In fact, one extra year of education is associated with a reduction of the Gini coefficient by 1.4 percentage points.

Education empowers people everywhere to live healthier and sustainable lives. Education is also crucial to fostering tolerance between people and contributes to more peaceful societies.

How much progress have we made so far?

Despite years of steady growth in enrolment rates, non-proficiency rates remain disturbingly high. Globally, an estimated 617 million children and adolescents of primary and lower secondary school age— more than 55 per cent of the global total—lacked minimum proficiency in reading and mathematics in 2015. Non-proficiency rates are highest in sub-Saharan Africa and Central and Southern Asia, where more than 80 per cent of children of primary and lower secondary school age were not proficient in reading.

Where are people struggling the most to have access to education?

Adequate infrastructure and teacher training play a critical role in the quality of education. Sub-Saharan Africa faces the biggest challenges in providing schools with basic resources. The situation is extreme at the primary and lower secondary levels, where less than one half of schools in sub-Saharan Africa have access to drinking water, electricity, computers and the Internet.

Another important step towards the goal of good quality education for all is getting enough trained teachers into classrooms. Here again, sub-Saharan Africa lags behind.

Are there groups that have a more difficult access to education?

Yes, women and girls are one of these groups. About one-third of countries in the developing regions have not achieved gender parity in primary education.

In sub-Saharan Africa, Oceania and Western Asia, girls still face barriers to entering both primary and secondary school. These disadvantages in education also translate into lack of access to skills and limited opportunities in the labour market for young women.

What can we do?

Ask our governments to place education as a priority in both policy and practice. Lobby our governments to make firm commitments to provide free primary school education to all, including vulnerable or marginalized groups.

Encourage the private sector to invest resources in the development of educational tools and facilities. Urge NGOs to partner with youth and other groups to foster the importance of education within local communities.

Daily Action Points:

1. Teach your native language to migrants in a youth centre or elsewhere.
2. Provide food at schools to increase attendance.
3. Educate your kids about the power of education, as many don't see the tangible benefits.
4. Show films or TV shows that are educational as well as entertaining for children.
5. Take education outside the school and keep it fun. Travel. Take kids on day trips to the planetarium or museums.
6. Support charities that are working in education in the poorest parts of the world.
7. Donate books to public libraries or public schools in need.
8. Share success stories, including stories that didn't make the headlines.
9. In many countries, girls are pulled out of school early in order to get married. Start conversations that allow for problems to be openly discussed and solutions to be found.
10. Share your skills with the ones who need them.

Goal No 5: GENDER EQUALITY: WHY IT MATTERS

In 2018, women only held 27 per cent of managerial positions worldwide.

What's the goal here?

To achieve gender equality and empower all women and girls.

Why?

Women and girls represent half of the world's population and therefore also half of its potential. But, today gender inequality persists everywhere and stagnates social progress.

Women continue to be underrepresented at all levels of political leadership. Across the globe, women and girls perform a disproportionate share of unpaid domestic work.

Inequalities faced by girls can begin right at birth and follow them all their lives. In some countries, girls are deprived of access to health care or proper nutrition, leading to a higher mortality rate.

How much progress have we made?

Women and girls around the world continue to experience violence and cruel practices. Physical and/ or sexual violence affects women of all ages, ethnicities, socioeconomic status and educational level.

Child marriage also affects girls' education. About one third of developing countries have not achieved gender parity in primary education. In sub-Saharan Africa, Oceania and Western Asia, girls still face barriers to entering both primary and secondary school.

How does gender inequality affect women?

Disadvantages in education translate into lack of access to skills and limited opportunities in the labour market. Women's and girls' empowerment is essential to expand economic growth and promote social development. The full participation of women in labour forces would add percentage points to most national growth rates—double digits in many cases.

Are there any other gender related challenges?

Yes. Worldwide, 35 per cent of women between 15-49 years of age have experienced physical and/ or sexual intimate partner violence or non-partner sexual violence. 1 in 3 girls aged 15-19 have experienced some form of female genital mutilation/cutting in the 30 countries in Africa and the Middle East, where the harmful practice is most common with a high risk of prolonged bleeding, infection (including HIV), childbirth complications, infertility and death. The [Spotlight Initiative](#), an EU/UN partnership, is a global, multi-year initiative focused on eliminating all forms of violence against women and girls (VAWG).

But, why should gender equality matter to me? Regardless of where you live in, gender equality is a fundamental human right. Advancing gender equality is critical to all areas of a healthy society, from reducing poverty to promoting the health, education, protection and the well-being of girls and boys. Investing in education programmes for girls and increasing the age at which they marry can return \$5 for every dollar spent. Investing in programs improving income-generating activities for women can return \$7 dollars for every dollar spent.

What can we do to fix these issues?

If you are a girl, you can stay in school, help empower your female classmates to do the same and fight for your right to access sexual and reproductive health services. If you are a woman, you can address unconscious biases and implicit associations that form an unintended and often an invisible barrier to equal opportunity. If you are a man or a boy, you can work alongside women and girls to achieve gender equality and embrace healthy, respectful relationships. You can fund education campaigns to curb cultural practices like female genital mutilation and change harmful laws that limit the rights of women and girls and prevent them from achieving their full potential.

Daily Action Points:

1. Increase gender representation in areas of leadership in the workplace.
2. Practice and demonstrate to children equal decision-making processes at home.
3. Encourage schools to provide scholarships for girls.
4. Communicate to media outlets (advertising companies, movie production houses and so on) about the harmful impact of portraying women as inferior, less intelligent and incompetent compared to their male counterparts.
5. Use mentoring and coaching to help women build their confidence and develop their careers.
6. If you are a woman, know your rights and stand up for them.
7. Make flexibility and work-life balance a part of the company's culture.
8. Make gender equality part of training and education. Young people should be supported in choosing jobs that advance their future, regardless of their gender.
9. Sponsor a girl child who needs a role model.
10. Gender equality starts at home.

Goal No 6: CLEAN WATER AND SANITATION: WHY IT MATTERS

Half of the world's population is already experiencing severe water scarcity at least one month a year

What's the goal here?

To ensure access to safe water sources and sanitation for all.

Why?

The demand for water has outpaced population growth, and half the world's population is already experiencing severe water scarcity at least one month a year. Access to water, sanitation and hygiene is a human right, yet billions are still faced with daily challenges accessing even the most basic of services.

3 in 10 people lack access to safely managed drinking water services. About 3 billion people lack access to basic sanitation services, such as toilets or latrines.

More than 80 per cent of wastewater resulting from human activities is discharged into rivers or sea without any treatment, leading to pollution.

What are the effects of this?

Water and sanitation-related diseases remain among the major causes of death in children under five; more than 800 children die every day from diarrhoeal diseases linked to poor hygiene.

Proper water and sanitation is a key foundation for achieving the Sustainable Development Goals, including good health and gender equality.

By managing our water sustainably, we are also able to better manage our production of food and energy and contribute to decent work and economic growth. Moreover, we can preserve our water ecosystems, their biodiversity, and take action on climate change.

What would it cost to correct the problem?

A study by the World Bank Group, UNICEF and the World Health Organization estimates that extending basic water and sanitation services to the unserved would cost US\$28.4 billion per year from 2015 to 2030, or 0.10 per cent of the global product of the 140 countries included in its study.

What would it cost if we don't correct the problem?

The costs are huge—both for people and for the economy. Worldwide, more than 2 million people die every year from diarrhoeal diseases. Poor hygiene and unsafe water are responsible for nearly 90 per cent of these deaths and mostly affect children.

The economic impact of not investing in water and sanitation costs 4.3 per cent of sub-Saharan African GDP. The World Bank estimates that 6.4 per cent of India's GDP is lost due to adverse economic impacts and costs of inadequate sanitation.

Without better infrastructure and management, millions of people will continue to die every year and there will be further losses in biodiversity and ecosystem resilience, undermining prosperity and efforts towards a more sustainable future.

What can we do?

Civil society organizations should work to keep governments accountable, invest in water research and development, and promote the inclusion of women, youth and indigenous communities in water resources governance.

Generating awareness of these roles and turning them into action will lead to win-win results and increased sustainability and integrity for both human and ecological systems.

You can also get involved in the [World Water Day](#) and [World Toilet Day](#) campaigns that aim to provide information and inspiration to take action on hygiene issues.

Daily Action Points:

1. Read a book on water. It will increase your understanding of the impact water has in societies, economies and our planet.
2. Conserve, conserve, conserve. When ice-cubes are left over from a drink, don't throw them away. Put them into plants.
3. Support organisations that give water to areas in need.
4. Donate to projects that require funds for digging boreholes, installing pipes and pumps, maintenance training to communities etc.
5. Fix leaks at home. A leaky faucet can waste more than 11'000 litres per year.
6. Hold fundraising days in schools on World Water Day and Toilet Day and donate the money to your chosen project.
7. Never flush toxic chemicals such as paints, chemicals or medication down the toilet. It pollutes lakes and rivers and causes health problems in marine life and humans.
8. Wash your car at commercial car washers who recycle water.
9. Turn off the tap when brushing your teeth and while soaping in the shower.
10. Hire a "Green Plumber" to reduce your water, energy and chemical use.

Goal No 7: AFFORDABLE AND CLEAN ENERGY: WHY IT MATTERS

3 billion people lack access to clean cooking fuels, resulting in nearly 4 million premature deaths each year

What's the goal here?

To ensure access to affordable, reliable, sustainable and modern energy for all.

Why?

A well-established energy system supports all sectors: from businesses, medicine and education to agriculture, infrastructure, communications and high-technology. Access to electricity in poorer countries has begun to accelerate, energy efficiency continues to improve, and renewable energy is making impressive gains. Nevertheless, more focused attention is needed to improve access to clean and safe cooking fuels and technologies for 3 billion people.

I have access to electricity. Why should I care about this goal?

For many decades, fossil fuels such as coal, oil or gas have been major sources of electricity production, but burning carbon fuels produces large amounts of greenhouse gases which cause climate change and have harmful impacts on people's well-being and the environment. This affects everyone, not just a few. Moreover, global electricity use is rising rapidly. In a nutshell, without a stable electricity supply, countries will not be able to power their economies.

How many people are living without electricity?

Nearly 9 out of 10 people now have access to electricity, but reaching the unserved will require increased efforts. In sub-Saharan Africa, an estimated 573 million people still lacked access to electricity. Without electricity, women and girls have to spend hours fetching water, clinics cannot store vaccines for children, many schoolchildren cannot do homework at night, and people cannot run competitive businesses. The health and well-being of some 3 billion people are adversely impacted by the lack of clean cooking fuels, such as wood, charcoal, dung and coal, which causes indoor air pollution.

What would it cost to switch to more sustainable energy?

The world needs to triple its investment in sustainable energy infrastructure per year, from around \$400 billion now to \$1.25 trillion by 2030. Regions with the greatest energy deficits—sub-Saharan Africa and South Asia—need our help to improve energy access. That includes pushing harder to find clean, efficient, and affordable alternatives to health-damaging cook stoves.

What can we do to fix these issues?

Countries can accelerate the transition to an affordable, reliable, and sustainable energy system by investing in renewable energy resources, prioritizing energy efficient practices, and adopting clean energy technologies and infrastructure. Businesses can maintain and protect ecosystems to be able to use and further develop hydropower sources of electricity and bioenergy, and commit to sourcing 100% of operational electricity needs from renewable sources.

Employers can reduce the internal demand for transport by prioritizing telecommunications and incentivize less energy intensive modes such as train travel over auto and air travel. Investors can invest more in sustainable energy services, bringing new technologies to the market quickly from a diverse supplier base.

You can save electricity by plugging appliances into a power strip and turning them off completely when not in use, including your computer. You can also bike, walk or take public transport to reduce carbon emissions.

Daily Action Points:

1. Cover the pan with a lid. It reduces the amount of energy required to boil water by 75%.
2. Turn off electronic equipment such as TVs and computers when going on holiday.
3. Turn lights off in rooms that aren't being used. When you switch your lights off, even for a few seconds, it saves more energy than it takes for the light to start up, regardless of the bulb type.
4. Efficient home designs also combine energy efficient constructions, appliances and lighting, such as solar water heating and solar electricity.
5. Use energy efficient light bulbs and set your household appliances on low energy settings.
6. Turn down thermostat and fill the house with carpets to keep the warmth inside.
7. Support solar power projects for schools, homes and offices.
8. Only fill the kettle to the amount of water needed.
9. Installing Air-Conditioning? Ask for solar air conditioning.
10. Seek advice and guidance on energy efficiency in historic buildings.

Goal No 8: DECENT WORK AND ECONOMIC GROWTH: WHY IT MATTERS

In 2018, 20 per cent of the world's youth were not engaged in either education, employment or training.

What's the goal here?

To promote, inclusive and sustainable economic growth, employment and decent work for all.

Why?

Sustained and inclusive economic growth can drive progress, create decent jobs for all and improve living standards.

While real GDP per capita and labour productivity have increased globally, 731 million people remain below the US\$1.90 poverty line.

How many people are unemployed?

The global unemployment rate has finally recovered from the global financial crisis of 2009. In 2018, it stood at 5 per cent—matching the pre-crisis level. However, large disparities exist across regions and age groups. In 2018, the unemployment rates in Northern Africa and Western Asia and Latin America and the Caribbean were over 2.5 times higher than those in Central and Southern Asia.

Are jobs enough?

Having a job does not guarantee a decent living. In fact, 8 per cent of employed workers and their families worldwide lived in extreme poverty in 2018.

In addition to creating jobs, we also need to improve conditions for more than 700 million women and men who are working, but not earning enough to lift themselves and their families out of poverty.

In addition, women and girls must enjoy equal access to equal opportunities with men and boys for employment.

I have a job. Why does this matter to me?

Society as a whole benefits when more people are being productive and contributing to their country's growth. Productive employment and "decent work" are key elements to achieving fair globalization and poverty reduction. In addition, unemployment can lead to unrest and disrupt peace if it is left unaddressed.

What does "decent work" mean?

Decent work means opportunities for everyone to get work that is productive and delivers a fair income, security in the workplace and social protection for families, better prospects for personal development and social integration. It is also important that all

women and men are given equal opportunities in the workplace. A continued lack of decent work opportunities, insufficient investments and under-consumption lead to an erosion of the basic social contract underlying democratic societies: that all must share in progress.

What can we do to fix these issues?

Providing youth the best opportunity to transition to a decent job calls for investing in education and training of the highest possible quality, providing youth with skills that match labour market demands, giving them access to social protection and basic services regardless of their contract type, as well as levelling the playing field so that all aspiring youth can attain productive employment regardless of their gender, income level or socio-economic background.

Governments can work to build dynamic, sustainable, innovative and people-centred economies, promoting youth employment and women's economic empowerment, in particular, and decent work for all. Local authorities and communities can renew and plan their cities and human settlements so as to foster community cohesion and personal security and to stimulate innovation and employment.

Daily Action Points:

1. Encourage Bring your-child-to-work Day for youth to see what a healthy work environment looks like.
2. Become a micro-lender and empower young people to become entrepreneurs.
3. Support international campaigns to end the modern day slavery, forced labour, human trafficking and forced marriages.
4. Provide stability. Empower young professionals to grow into their positions.
5. Provide food for low earning workers.
6. Provide incentives for hard work. People respond to a reward system.
7. Provide reduced rate on quality health system and facilities for employees.
8. Ensure safe working conditions.
9. Encourage more job opportunities for youth.
10. Financially assist training and development programs for an enhanced skillset.

Goal No 9: INDUSTRY, INNOVATION AND INFRASTRUCTURE: WHY IT MATTERS

3.8 billion People do not have access to the internet representing 80 per cent of the population in the least developed countries.

What's the goal here?

To build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.

Why?

Economic growth, social development and climate action are heavily dependent on investments in infrastructure, sustainable industrial development and technological progress.

In the face of a rapidly changing global economic landscape and increasing inequalities, sustained growth must include industrialization that first of all, makes opportunities accessible to all people, and two, is supported by innovation and resilient infrastructure.

So what's the problem?

Basic infrastructure like roads, information and communication technologies, sanitation, electrical power and water remains scarce in many developing countries. An estimated 3.8 billion people still do not have access to the Internet, representing 80% of the population in the least developed countries. 3 billion people worldwide lack access to basic sanitation and 3 in 10 people lack access to safely managed drinking water.

How much progress have we made?

The growth of manufacturing in both developing and developed regions slowed in 2018, attributed largely to emerging trade and tariff barriers that constrain investment and future expansion. The disparities in industrial productivity between rich and poor nations also remain stark.

Why should I care?

Inclusive and sustainable industrialization, together with innovation and infrastructure, can unleash dynamic and competitive economic forces that generate employment and income. They play a key role in introducing and promoting new technologies, facilitating international trade and enabling the efficient use of resources.

The growth of new industries means improvement in the standard of living for many of us. Also, if industries pursue sustainability, this approach will have a positive effect on the environment. Climate change affects all us.

What is the price of inaction?

The price is steep. Ending poverty would be more difficult, given the industry's role as a core driver of the global development agenda to eradicate poverty and advance

sustainable development. Additionally, failing to improve infrastructure and promote technological innovation could translate into poor health care, inadequate sanitation and limited access to education.

How can we help?

Establish standards and promote regulations that ensure company projects and initiatives are sustainably managed.

Collaborate with NGOs and the public sector to help promote sustainable growth within developing countries.

Think about how industry impacts on your life and well-being and use social media to push for policymakers to prioritize the SDGs.

Daily Action Points:

1. Fund projects that provide infrastructure for basic need.
2. Host a small event for people to donate their unused, working phones, and in turn raise the awareness about the lack of infrastructure for communication services that 1-1.5 billion people still do not have.
3. Hospitals, schools and clinics can host fundraising events for projects developing health care infrastructure.
4. Immerse yourself. Organise groups to visit regions where basic needs are missing. This will broaden understanding and motivate people to act on it.
5. Encourage sustainable infrastructure with efficient resources and environmentally friendly technologies.
6. Keep up to date with latest technologies and innovation.
7. Invest in domestic technology development research and innovation in developing countries.
8. Employ more scientific researchers and development workers in the industrial sector.
9. Make cities healthy. Turn empty roof space on buildings into green roofs. They improve air quality, insulation by up to 25%, they absorb sound, promote social integration and more.
10. Don't throw away, give away. Upgrading our electronic gadgets is inevitable, but often our gadgets are still in good working condition. Pass on your old working devices or recycle as certain parts can be recovered.

Goal No 10: REDUCE INEQUALITIES: WHY IT MATTERS

16,000 children die each day from preventable diseases such as measles and Tuberculosis.

What's the goal here?

To reduce inequalities within and among countries.

Why?

Inequalities based on income, sex, age, disability, sexual orientation, race, class, ethnicity, religion and opportunity continue to persist across the world, within and among countries. Inequality threatens long-term social and economic development, harms poverty reduction and destroys people's sense of fulfilment and self-worth. This, in turn, can breed crime, disease and environmental degradation.

Most importantly, we cannot achieve sustainable development and make the planet better for all if people are excluded from opportunities, services, and the chance for a better life. Despite progress in some areas, income inequality continues to rise in many parts of the world.

What are some examples of inequality?

16,000 children die each day from preventable diseases such as measles and tuberculosis. Rural women are three times more likely to die while giving birth than women in urban centres. Persons with disabilities are the world's largest minority. 80 per cent of them live in developing countries. Women and girls with disabilities face double discrimination. These are just a few examples, but it is an issue that affects every country in the world.

Why should I need to care about inequality if I don't face any discrimination?

In today's world, we are all interconnected. Problems and challenges, be they poverty, climate change, migration or economic crises are never just confined to one country or region. Even the richest countries still have communities living in abject poverty. The oldest democracies still wrestle with racism, homophobia and transphobia, and religious intolerance. Global inequality affects us all, no matter who we are or where we are from.

Can we actually achieve equality for everyone in this world?

It can be and should be achieved to ensure a life of dignity for all. Political, economic and social policies need to be universal and pay particular attention to the needs of disadvantaged and marginalized communities.

Recent statistics have shown that this is possible. Between 2010 and 2016, in 60 out of 94 countries with data, the incomes of the poorest 40 per cent of the population grew faster than those of the entire population.

What can we do?

Reducing inequality requires transformative change. Greater efforts are needed to eradicate extreme poverty and hunger, and invest more in health, education, social protection and decent jobs especially for young people, migrants and other vulnerable communities.

Within countries, it is important to empower and promote inclusive social and economic growth. We can ensure equal opportunity and reduce inequalities of income if we eliminate discriminatory laws, policies and practices.

Among countries, we need to ensure that developing countries are better represented in decision-making on global issues so that solutions can be more effective, credible and accountable.

Governments and other stakeholders can also promote safe, regular and responsible migration, including through planned and well-managed policies, for the millions of people who have left their homes seeking better lives due to war, discrimination, poverty, lack of opportunity and other drivers of migration.

Daily Action Points:

1. Encourage children to make friends with kids from different cultures.
2. Once a month have a coffee with a person who is different from you, whether in race, beliefs, culture or age.
3. Learn to respect all kinds of people who may do things differently from you.
4. Take your kids to the park and other communal spaces and look for opportunities to talk to different people. Learn about them. Understand them.
5. Travel the world to learn about different cultures.
6. Sponsor a child to attend a school.
7. Read storybooks to children that describe all the cultures.
8. Say yes to increasing minimum wage of the lowest earning people.
9. Build school, homes and offices to be more accommodating to older persons and people with disabilities.
10. Stop stereotype. Write a blog of short stories that breaks the way of thinking.

Goal No 11: SUSTAINABLE CITIS AND COMMUNITIES: WHY IT MATTERS

60 per cent of the world's population will live in cities by 2030

What's the goal here?

To make cities inclusive, safe, resilient and sustainable.

Why?

The world is becoming increasingly urbanized. Since 2007, more than half the world's population has been living in cities, and that share is projected to rise to 60 per cent by 2030.

Cities and metropolitan areas are powerhouses of economic growth contributing about 60 per cent of global GDP. However, they also account for about 70 per cent of global carbon emissions and over 60 per cent of resource use.

What are some of the most pressing challenges that cities face today?

Inequality is a big concern. Over 1 billion people live in slums and this number keeps rising. The levels of urban energy consumption and pollution are also worrying. Cities occupy just 3 per cent of the Earth's land, but account for 60-80 per cent of energy consumption and 70 per cent of carbon emissions. Many cities are also more vulnerable to climate change and natural disasters due to their high concentration of people and location so building urban resilience is crucial to avoid human, social and economic losses.

I live in a city but I'm not affected by any of these issues. Why should I care?

All these issues will eventually affect every citizen. Inequality can lead to unrest and insecurity, pollution deteriorates everyone's health and affects workers' productivity and therefore the economy, and natural disasters have the potential to disrupt everyone's lifestyles.

What happens if cities are just left to grow organically?

The cost of poorly planned urbanization can be seen in some of the huge slums, tangled traffic, greenhouse gas emissions and sprawling suburbs all over the world. Slums are a drag on GDP, and lower life expectancy. By choosing to act sustainably we choose to build cities where all citizens live a decent quality of life, and form a part of the city's productive dynamic, creating shared prosperity and social stability without harming the environment.

Is it expensive to put sustainable practices in place?

The cost is minimal in comparison with the benefits. For example, there is a cost to creating a functional public transport network, but the benefits are huge in terms of economic activity, quality of life, the environment, and the overall success of a networked city.

What can I do to help achieve this goal?

Take an active interest in the governance and management of your city. Advocate for the kind of city you believe you need.

Develop a vision for your building, street, and neighbourhood, and act on that vision. Are there enough jobs? Can your children walk to school safely? Can you walk with your family at night? How far is the nearest public transport? What's the air quality like? What are your shared public spaces like? The better the conditions you create in your community, the greater the effect on quality of life.

Daily Action Points:

1. Start a car pooling system online, internally in the office or in areas that don't have access to reliable public transport.
2. Generate awareness about your city's carbon footprint and ways to improve it.
3. Advocate and support the development of sport and recreational spaces. They help build stronger, healthier, happier and safer communities.
4. Use public transport, city bikes and other modes of environmentally friendly transport.
5. Research, encourage and raise awareness for greater information transparency within your community.
6. Reach out to underprivileged areas. Integrate people of different class and ethnicity and include them in decision-making processes that involve them, including their living conditions, pollution and so on.
7. Provide reduced fees on public transport in cities that face the challenge of congestion.
8. Educate yourself on the cultural and natural heritage of your area. Visit heritage sites and post about these in a positive light.
9. Gather in small community groups to brainstorm ways to ensure safe and accessible public spaces especially for women, children, elderly people and people with disabilities.
10. As a company, offer reduced fees on city bicycle hire.

Goal No 12: RESPONSIBLE CONSUMPTION AND PRODUCTION: WHY IT MATTERS

If the global population reaches 9.6 billion by 2050, the equivalent of almost three planets will be required to sustain current lifestyles.

What is the goal here?

To ensure sustainable consumption and production patterns.

Why?

Economic and social progress over the last century has been accompanied by environmental degradation that is endangering the very systems on which our future development and very survival depend.

If we don't act to change our consumption and production patterns, we will cause irreversible damage to our environment.

What are some of the current consumption and production patterns that need to change?

There are many aspects of consumption that with simple changes can have a big impact on society as a whole. For example, about one third of the food produced for human consumption each year is lost or wasted. When it comes to consumers, households consume 29 per cent of global energy and contribute to 21 per cent of resultant CO₂ emissions.

Water pollution is also a pressing issue that needs a sustainable solution. We are polluting water faster than nature can recycle and purify water in rivers and lakes. Urgent action is needed to ensure that current material needs do not lead to over-extraction of resources and further degradation of the environment.

How can I help as a business?

It's in businesses' interest to find new solutions that enable sustainable consumption and production patterns. A better understanding of environmental and social impacts of products and services is needed, both of product life cycles and how these are affected by use within lifestyles.

Identifying "hot spots" within the value chain where interventions have the greatest potential to improve the environmental and social impact of the system as a whole is a crucial first step.

Businesses can also use their innovative power to design solutions that can both enable and inspire individuals to lead more sustainable lifestyles, reducing impacts and improving well-being.

How can I help as a consumer?

There are two main ways to help: 1. Reducing your waste and 2. Being thoughtful about what you buy and choosing a sustainable option whenever possible. Reducing our waste can be done in many ways, from ensuring you don't throw away food to reducing your consumption of plastic—one of the main pollutants of the ocean. Carrying a reusable bag, refusing to use plastic straws, and recycling plastic bottles are good ways to do your part every day.

Making informed purchases about what we're buying also helps. For example, the textile industry today is the second largest polluter of clean water after agriculture, and many fashion companies exploit textile workers in the developing world. If you can buy from sustainable and local sources you can make a difference as well as exercising pressure on businesses to adopt sustainable practices.

Daily Action Points:

1. Don't keep clothes or other items you are not using donate them.
2. Arrange school groups to spend 1 hour a week on the beach, along lakes or in parks to pick up the litter and to raise awareness on water pollution.
3. Buy fruit that is in funny shapes and overripe, and make smoothies out of them.
4. Partner with hotels and restaurants to fast track leftover foods to charities that would otherwise be thrown away.
5. Recycle.
6. Keep showers short. Don't fill bath to the top. Excessive use of water contributes to global water stress.
7. Buy sustainable products including electronics, toys, shampoo or seafood and organic groceries.
8. Eat local. And support fair trade associations that support and promote businesses committed to the principles of fair trade.
9. Do a cold wash. Warm water uses more energy.
10. Drink tap water when it is safe.

Goal No 13: CLIMATE ACTION: WHY IT MATTERS

To limit global warming to 1.5°C, global carbon emissions need to fall by a staggering 45 per cent by 2030 from 2010 levels.

What's the goal here?

Taking urgent action to tackle climate change and its impacts.

Why?

As greenhouse gas levels continue to climb, climate change is occurring at much higher rates than anticipated, and its effects are evident worldwide. By addressing climate change, we can build a sustainable world for everyone. But we need to act now.

Are people's lives really being affected by climate change?

Yes. Severe weather and rising sea levels are affecting people and their property in developed and developing countries. From a small farmer in the Philippines to a businessman in London, climate change is affecting everyone, especially the poor and vulnerable, as well as marginalized groups like women, children, and the elderly.

What happens if we don't take action?

What happens if we don't take action? If left unchecked, climate change will cause average global temperatures to increase beyond 3°C, and will adversely affect every ecosystem. Already, we are seeing how climate change can exacerbate storms and disasters, and threats such as food and water scarcity, which can lead to conflict. Doing nothing will end up costing us a lot more than if we take action now. We have an opportunity to take actions that will lead to more jobs, great prosperity, and better lives for all while reducing greenhouse gas emissions and building climate resilience.

Can we solve this problem or is it too late to act?

To address climate change, we have to vastly increase our efforts. Much is happening around the world – investments in renewable energy have soared. But so much more needs to be done. The world must transform its energy, industry, transport, food, agriculture and forestry systems to ensure that we can limit global temperature rise to well below 2°C, maybe even 1.5°C. In December 2015, the world took a significant first step by adopting the Paris Agreement, in which all countries committed to take action to address climate change. Many businesses and investors are also committing themselves to lower their emissions, not just because it is the right thing to do, but because it makes economic and business sense as well.

How much would it cost to solve this problem?

In total, public and private sector investment in clean energy needs to reach at least US\$1 trillion per year by 2030, and more to build climate resilience. This sounds like a lot, but consider that of the US\$1.7 trillion invested in the global energy supply in 2016,

nearly 70% was related to fossil fuels. But more and more, governments and businesses are finding that investments in renewable energy and sustainability are paying off.

What's more is that the estimated costs of mitigation do not account for the benefits of reduced climate change. These include cleaner air, greater food security, more liveable cities, and better health. Investments of only \$6 billion for disaster risk reduction over the next 15 years would result in total benefits of \$360 billion in terms of avoided losses over the lifetime of the investment.

What can I do to help achieve this goal?

There are many things that each of us can do as individuals. To find out what you can do, go to: <https://www.un.org/en/actnow>

Daily Action Points:

1. Compost food scraps.
2. Drive less. Walk, cycle, take public transport or car pool.
3. Take re-useable bags to the store.
4. Air dry. Let your hair and clothes dry naturally.
5. Avoid driving in peak hours.
6. Maintain your car. A well-maintained car emits fewer toxic fumes.
7. Organise for your school or company to plant new trees every year. Trees give oxygen and take in carbon dioxide.
8. Unplug TVs, computers and other electronics when not in use.
9. Spread awareness about ways to stop global warming.
10. Only buy what you need. 20-50% of the food we buy ends up in landfill.

Goal No 14: LIFE BELOW WATER: WHY IT MATTERS

Over 3 billion people depend on marine and coastal biodiversity for their livelihood.

What's the goal here?

To conserve and sustainably use the world's oceans, seas and marine resources.

Why?

Oceans provide key natural resources including food, medicines, biofuels and other products. They help with the breakdown and removal of waste and pollution, and their coastal ecosystems act as buffers to reduce damage from storms. Maintaining healthy oceans supports climate change mitigation and adaptation efforts. And have you been to the seaside? It's also a great place for tourism and recreation.

Even more, Marine Protected Areas contribute to poverty reduction by increasing fish catches and income, and improving health. They also help improve gender equality, as women do much of the work at small-scale fisheries.

The marine environment is also home to a stunning variety of beautiful creatures, ranging from single-celled organisms to the biggest animal ever to have lived on the Earth—the blue whale. They are also home to coral reefs, one of the most diverse ecosystems on the planet.

Sounds like a worthwhile thing to protect. So what's the problem?

Increasing levels of debris in the world's oceans are having a major environmental and economic impact. Marine debris impacts biodiversity through entanglement or ingestion of debris items by organisms, which can kill them or make it impossible for them to reproduce.

As far as the world's coral reefs are concerned, about 20 per cent of them have been effectively destroyed and show no prospects for recovery. About 24 per cent of the remaining reefs are under imminent risk of collapse through human pressures, and a further 26 per cent are under a longer-term threat of collapse.

Furthermore, improper marine management results in overfishing. The lost economic benefits from the fisheries sector are estimated to be around US\$50 billion annually. The UN Environment Programme estimates the cumulative economic impact of poor ocean management practices is at least US\$200 billion per year. In the absence of mitigation measures, climate change will increase the cost of damage to the ocean by an additional US\$322 billion per year by 2050.

What would it cost to correct this?

The costs of taking action largely are offset by the long-term gains. In economic terms, the Convention on Biological Diversity suggests²³ that scaled up actions to sustain the

global ocean require a US\$32 billion one-time public cost and US\$21 billion dollars a year for recurring costs.

So what can we do?

For Open Ocean and deep sea areas, sustainability can be achieved only through increased international cooperation to protect vulnerable habitats. Establishing comprehensive, effective and equitably managed systems of government-protected areas should be pursued to conserve biodiversity and ensure a sustainable future for the fishing industry.

On a local level, we should make ocean-friendly choices when buying products or eating food derived from oceans and consume only what we need. Selecting certified products is a good place to start.

Making small changes in our daily lives, like taking public transport and unplugging electronics saves energy. These actions reduce our carbon footprint, a factor that contributes to rising sea levels.

We should eliminate plastic usage as much as possible and organize beach clean-ups. Most importantly, we can spread the message about how important marine life is and why we need to protect it.

Daily Action Points:

1. Start regularly volunteering in community groups to clean up a portion of the beach from litter if living nearby.
2. Don't buy jewellery and other items made from coral, tortoise shells or other marine life.
3. Eat local sustainable food.
4. Support organisations that protect the oceans.
5. Use fewer plastic products, which often end up in oceans causing the death of marine animals.
6. Respect laws related to over fishing.
7. Inform yourself on ocean activities by watching educational DVDs and documentaries.
8. Avoid buying wild-caught, salt-water fish for your home aquarium.
9. Only use the dishwasher and laundry machine when full.
10. Practice responsible recreational activities like boating, fishing, snorkelling and kayaking.

Goal No 15: LIFE ON LAND: WHY IT MATTERS

1 million plant and animal species are at risk of extinction.

What's the goal here?

To sustainably manage forests, combat desertification, halt and reverse land degradation, and halt biodiversity loss.

Why?

Forests cover nearly 31 per cent of our planet's land area. From the air we breathe, to the water we drink, to the food we eat—forests sustain us.

Around 1.6 billion people depend on forests for their livelihood. Almost 75 per cent of the world's poor are affected directly by land degradation.

Forests are home to more than 80 per cent of all terrestrial species of animals, plants and insects. However, biodiversity is declining faster than at any other time in human history. An estimated 20 per cent of the Earth's land area was degraded between 2000 and 2015.

Biodiversity and the ecosystem services it underpins can also be the basis for climate change adaptation and disaster risk reduction strategies as they can deliver benefits that will increase the resilience of people to the impacts of climate change.

Forests and nature are also important for recreation and mental well-being. In many cultures, natural landscapes are closely linked to spiritual values, religious beliefs and traditional teachings.

What would it cost to correct the problem?

The UN Forum on Forests Secretariat estimates that achieving sustainable forest management on a global scale would cost US\$70-\$160 billion per year. The Convention on Biological Diversity estimates that US\$150-\$440 billion per year is required to halt the loss of biodiversity at a global level by the middle of this century.

What would it cost if we don't correct the problem?

Biodiversity delivers multiple services from local to global levels, while responses to biodiversity loss range from emotional to utilitarian. For instance, insects and other pollen-carriers are estimated to be worth more than US\$200 billion per year to the global food economy. Three-quarters of the top-ranking global prescription drugs contain components derived from plant extracts, which would be threatened. Natural disasters caused by ecosystems disrupted by human impact and climate change already cost the world more than US\$300 billion per year. Deforestation and forest degradation results in loss of habitat for all species, a decrease in freshwater quality, an increase in soil erosion, land degradation and higher emissions of carbon into the atmosphere. In

short, not taking action on forests impacts both the health of the planet and our communities.

What can we do?

Inevitably, we change the ecosystems we are a part of through our presence—but we can make choices that either affirm diversity or devalue it.

Some things we can do to help include recycling, eating a locally-based diet that is sustainably sourced, consuming only what we need, and limiting energy usage through efficient heating and cooling systems. We must also be respectful toward wildlife and only take part in ecotourism opportunities that are responsibly and ethically run in order to prevent wildlife disturbance. Well-managed protected areas support healthy ecosystems, which in turn keep people healthy. It is therefore critical to secure the involvement of the local communities in the development and management of these protected areas.

Daily Action Points:

1. Avoid using pesticides that end up in rivers and lakes, as they are harmful to wildlife.
2. Eat seasonal produce. It tastes better, it is cheaper and it is environmentally friendly.
3. Help fund projects to rehabilitate lands.
4. Never buy products made from threatened or endangered species.
5. Recycle used paper and go paperless where possible.
6. When you go into stores, or when you participate in market places, make environmentally friendly choices that are in favour of our planet.
7. Eat less meat. The production and distribution of meat has a huge impact on greenhouse gas emissions.
8. Make your own compost. It supports biodiversity, enriches the soil, and reduces the need for chemical fertilizers.
9. Participate in local urban farming.
10. Buy recycle product.

Goal No 16: PEACE, JUSTICE AND STRONG INSTITUTIONS: WHY IT MATTERS

Today, 20 million people are refugees, over 41 million people have been internally displaced, and at least 4 million people are stateless.

What's the goal here?

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels.

Why?

Peaceful, just and inclusive societies are necessary to achieve the Sustainable Development Goals (SDGs). People everywhere need to be free of fear from all forms of violence and feel safe as they go about their lives whatever their ethnicity, faith or sexual orientation.

In order to advance the SDGs we need effective and inclusive public institutions that can deliver quality education and healthcare, fair economic policies and inclusive environmental protection.

What needs to be done to address this?

To achieve peace, justice and inclusion, it is important that governments, civil society and communities work together to implement lasting solutions to reduce violence, deliver justice, combat corruption and ensure inclusive participation at all times.

Freedom to express views, in private and in public, must be guaranteed. People must be able to contribute to decisions that affect their lives. Laws and policies must be applied without any form of discrimination. Disputes need to be resolved through functioning political and justice systems.

National and local institutions must be accountable and need to be in place to deliver basic services to families and communities equitably and without the need for bribes.

How does this goal apply to me, wherever I live?

Crimes that threaten the foundation of peaceful societies, including homicides, trafficking and other organized crimes, as well as discriminatory laws or practices, affect all countries. Even the world's greatest democracies face major challenges in addressing corruption, crime and human rights violations for everyone at home.

What would be the cost of not taking action now?

Armed violence and insecurity have a destructive impact on a country's development, affecting economic growth and often resulting in long-standing grievances among communities.

Violence, in all its forms, has a pervasive impact on societies. Violence affects children's health, development and well-being, and their ability to thrive. It causes trauma and weakens social inclusion.

Lack of access to justice means that conflicts remain unresolved and people cannot obtain protection and redress. Institutions that do not function according to legitimate laws are prone to arbitrariness and abuse of power, and less capable of delivering public services to everyone.

To exclude and to discriminate not only violates human rights, but also causes resentment and animosity, and could give rise to violence.

What can we do?

Take a genuine interest in what your government is doing. Raise awareness in your community about the realities of violence and the importance of peaceful and just societies, and identify how you can pursue the SDGs in your daily life.

Exercise your right to hold your elected officials to account. Exercise your right to freedom of information and share your opinion with your elected representatives.

Be the change – promote inclusion and respect towards people of different backgrounds, ethnic origins, religions, gender, sexual orientations or different opinions. Together, we can help to improve conditions for a life of dignity for all.

Daily Action Points:

1. Make your voice heard and vote in your country's elections.
2. Participate in your country's decision making processes in an informed manner.
3. Stop violence against women. If you see it happening, report it.
4. Find value in different demographics, thoughts and beliefs for an inclusive society.
5. Demonstrate a peaceful environment at home.
6. Be passionate about your country's decisions, and remain peaceful when standing up for what you believe in.
7. Read, write or make a video to stand up for peace.
8. Spend some time each week quietly reflecting on how would like to relate to others.
9. Volunteer at local anti-violence organisations and outreach programmes.
10. Host or participate in local community events to get to know one another in safe environments. This can be at sports events, barbeques, and festivals and so on.

Goal No 17: PARTNERSHIPS FOR THE GOALS: WHY IT MATTERS

Strong international cooperation is needed now more than ever to ensure that countries have the means to achieve the SDGs

What's the goal here?

To revitalize the global partnership for sustainable development.

Why?

In 2015, world leaders adopted the 2030 Agenda for Sustainable Development that aims to end poverty, tackle inequalities and combat climate change. We need everyone to come together—governments, civil society, scientists, academia and the private sector—to achieve the sustainable development goals.

Why does this matter to me?

We are all in this together. The Agenda, with its 17 Sustainable Development Goals, is universal and calls for action by all countries, both developed countries and developing countries, to ensure no one is left behind.

How much progress have we made?

Support for implementing the SDGs is gaining momentum, but major challenges remain. A growing share of the global population has access to the Internet, and a Technology Bank for Least Developed Countries has been established, yet the digital divide persists.

As partners, what would we need to do to achieve the Agenda?

We will need to mobilize both existing and additional resources—technology development, financial resources, capacity building— and developed countries will need to fulfil their official development assistance commitments.

Multi stake holder partnerships will be crucial to leverage the inter-linkages between the Sustainable Development Goals to enhance their effectiveness and impact and accelerate progress in achieving the Goals.

How can we ensure the resources needed are effectively mobilized and monitored?

This will be primarily the responsibility of countries. Reviews of progress will need to be undertaken regularly in each country, involving civil society, business and representatives of various interest groups. At the regional level, countries will share experiences and tackle common issues, while on an annual basis, at the United Nations, the High-Level Political Forum on Sustainable Development (HLPF), they will take stock of progress at the global level, identifying gaps and emerging issues, and recommending corrective action.

What can we do to help?

Join/create a group in your local community that seeks to mobilize action on the implementation of the SDGs.

Encourage your governments to partner with businesses for the implementation of the SDGs.

Register your initiatives on the SDGs Partnerships Platform to inform, educate, network, and be inspired!

Daily Action Points:

1. Encourage schools to embrace teamwork outside the classrooms in local communities and businesses.
2. Look for synergies and build stronger multi-stakeholder partnerships. Share knowledge, expertise, technology and financial resources.
3. Teach kids about partnerships through sport.
4. Collaborate with organisations that need funding in an area you feel strongly about.
5. Encourage corporate social responsibility towards projects related to sustainable development in developing countries.
6. Collaborate with organisations in different countries who share the same goals that you have.
7. Show the power of partnerships through documentaries on success stories.
8. Be clear, specific and creative about your social goals.
9. Techno-experts: partner with projects that need technological skills in developing countries.
10. Practice teamwork at home. Share activities among all family members and outside the family.
